

Unique Group Diving & Life Support

HYDRA

We are one of the world's leading designers and manufacturers of diving and life support equipment. Unique Group's Hydra brand comprises a range of industry-leading products specifically designed to provide robust life-support equipment.

We apply our specialist knowledge, experience and expert support to deliver best-in-class systems, services and equipment for customers around the world. Our customers are oil and gas industry contractors, Navy and Air Force institutions, hospitals and private medical facilities for our range of life support equipment.

Our product range includes surface diving systems, modular saturation diving systems, integrated diving support vessels (DSV), saturation diving systems, hyperbaric reception facilities (HRF), self-propelled

hyperbaric lifeboats (SPHLs), naval transport, non-magnetic chambers, square medical hyperbaric facilities and altitude testing facilities.

Our product divisions are divided into Surface Diving Systems, Saturation Diving Systems, General Diving Equipment, Naval Diving and Life Support, Medical Life Support Systems and Aviation Life Support Systems.

Surface Diving Systems

Our IMCA-compliant surface diving systems and equipment are manufactured for the shallow water range: 50msw for air diving and 75msw for mixed gas diving. The equipment and system can be ordered as non-classed or classed (LR, ABS or DNV). The products include containerised chambers, machinery and control rooms with Launch and Recovery systems for air diving baskets, wet-bells and twin basket units. A quality documentation package and FMEA complete the package of deliverables with each system.

Saturation Diving Systems

With a significant track record in manufacturing classed saturation diving systems, we are ideally positioned to manufacture custom DSV saturation, portable and HRF saturation systems to the client's requirements. Our bell and chamber life support equipment, diver's heaters and environmental controls are the most robust in the industry.

General Diving Equipment

Offering a wide range of products from personal diving equipment and diving consumables, to dive panels and winches, we are ready to meet your specific diving requirements.

Naval Diving and Life Support

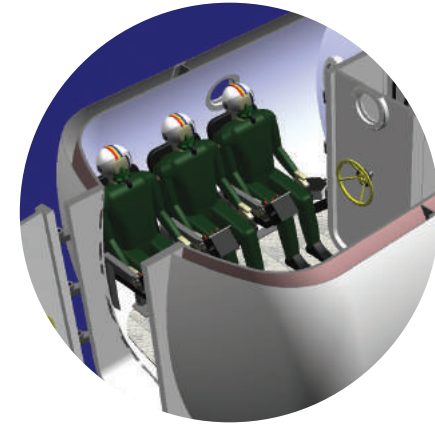

Our diving systems are specifically designed for Naval applications and include:

- Containerised military chambers with STANAG flanges
- Submarine rescue decompression systems for surface support and lock-on capability
- Submarine rescue bell
- Military salvage systems for fast intervention to 300msw
- Dive simulators with in-water training to 200msw
- Transport chambers for light weight air transportable capability

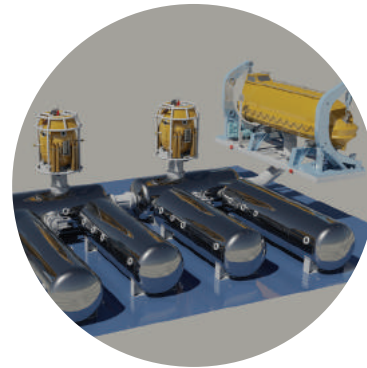

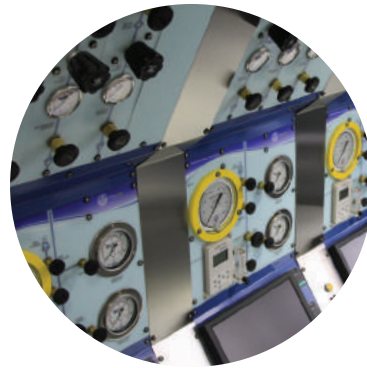

Medical Life Support Systems

Our Uni-Heal brand of Medical Hyperbaric Equipment is well accepted in the industry. Starting in Naval medical hospitals the brand has expanded to include private and state-owned hospitals across the world. Our product offering includes square chamber design with a full automation control and manual control. Our designs offer a realistic hospital room experience.

Aviation Life Support Systems

Our range of aviation pressure simulators enable aviators to train in low oxygen environments and high altitude pressures. The controls are either fully automatic or semi-automatic. Our high altitude simulators conform to the STANAG compliance for simulators and the NFPA requirements for PVHO.
