

LR100 A2, 2 Diver Wetbell System

Description:

The LR100 A2 is a wet-bell deployment unit with a combined divers control room, umbilical storage and management all in one ISO container footprint. The LR100 A2 is a 2 diver launch and recovery A-frame. The skid and A-frame are manufactured to suit tough usage and harsh marine conditions through the use of a durable marine-grade paint system. The winch and hydraulic package includes a 1,9-ton divers' winch with 110m of wire rope, and a 1,3-ton (2,6-ton double-reeved) guide wire winch with 220m of wire rope. Two independent hydraulic power packs are mounted on the winch skid and provide main and standby power requirements for the system. The L&R comes

complete with a full documentation package that provides all that is required to pass an IMCA audit first time. The dive control room is fitted with a 3 diver panel and wet-bell control panel; communications and other optional diver control systems can be easily integrated into the control room. Ask our Sales Team for further information on this diving solution.

Specifications:

Length: ± 6030mm
 Width: ± 2500mm
 Height: ± 4600mm
