

**Hydroweld, Welding Rods**

**Description:**

These wet welding electrodes are the result of over 5 years research and development into flux formulations, filler metals and supplementary coatings. They are designed to work in all positions in fresh water or brine to a depth of 100 metres. Their outstanding user friendly properties and wet welding characteristics, easily produce high quality wet welds to internationally recognised standards. The electrodes are available in 3.2mm x 350mm long and are sold in boxes of 90 electrodes or 4mm x 350mm and are sold in boxes of 60 electrodes.

**Features:**

- General purpose wet welding electrodes
- Enhanced rutile flux coated
- Optimum size for easy manipulation
- Simple to use in all positions
- Easy to strike and re-strike
- Smooth, easily maintained visible arc
- High metal transfer efficiency
- Excellent root penetration and sidewall fusion
- Finely rippled, well-shaped beads
- Self-releasing slag

**Order Detail:**

Welding Rods FS, Hydroweld, 3.2 mm	D-ST-166
Welding Rods FS, Hydroweld, 4 mm x 350mm, 60 pieces	D-ST-167
